

## Defaqto Engage Release Note Version 2.0.0.2

### Issues completed/resolved

#### General

No	Description	Benefit
1	Included version information within the 'About Defaqto Engage' tab accessible via the 'Settings' menu.	Accessing this tab will display the version number of the Engage release installed on the client PC. This will aid queries to Defaqto Customer Services and help them identify potential issues based on the version being used.
3	Fixed bug in Matching Products list when product / provider names contain apostrophe.	Selecting particular provider names containing apostrophes could cause errors when viewing Matching Products. This has now been fixed.
4	Renamed report / suitability report buttons.	These buttons have been renamed 'Create Research Report' and 'Create Suitability Report' to differentiate between the Defaqto Report and the Enhanced Suitability Report.
5	Added highlighting of selected sifts to Issues Selection screen.	As sifts are chosen from within this screen they are displayed in bold with each selection of an issue increasing the visibility of selected issues.
6	Amendments to the Exchange integration.	A fix has been applied to update the integration to take account of formatting issues relating to date of birth information.
